

30-Day Web Development Roadmap (HTML, CSS & JavaScript)

Goal: Go from zero to building and deploying a responsive, interactive website — no prior coding experience needed.

Time commitment: ~1-2 hours/day **Tools needed:** A computer, [VS Code](#) (free code editor), a web browser (Chrome or Firefox), and a free [GitHub](#) account.

Week 1: HTML Foundations

Milestone: Understand how web pages are structured and build your first static page.

Day	Task	Resources
1	Set up VS Code, install the "Live Server" extension, create your first <code>.html</code> file. Learn what HTML/CSS/JS each do.	MDN: What is HTML?
2	Learn HTML document structure: <code><!DOCTYPE></code> , <code><html></code> , <code><head></code> , <code><body></code> , headings, paragraphs.	freeCodeCamp: Basic HTML
3	Learn lists (<code></code> , <code></code>), links (<code><a></code>), and images (<code></code>).	MDN: HTML text basics
4	Learn tables and forms (<code><table></code> , <code><form></code> , <code><input></code> , <code><button></code>).	MDN: HTML forms
5	Learn semantic HTML: <code><header></code> , <code><nav></code> , <code><main></code> , <code><section></code> , <code><footer></code> . Why it matters for accessibility/SEO.	MDN: Semantic HTML
6	Practice: build a plain-HTML personal bio page (no styling yet) using everything so far.	—
7	Review + Mini Project: Build a simple multi-section "About Me" HTML page with a nav, image, list of hobbies, and a contact form (non-functional is fine).	—

Week 1 Project: A single unstyled HTML page — "My Personal Profile" — with header, nav, bio section, image, list, and contact form.

Week 2: CSS Styling & Layout

Milestone: Style pages and build responsive layouts.

Day	Task	Resources
8	Learn CSS syntax, how to link a stylesheet, selectors, colors, fonts.	MDN: CSS first steps
9	Learn the box model: margin, border, padding, width/height.	CSS Box Model — MDN
10	Learn Flexbox for 1D layouts.	Flexbox Froggy (interactive game)
11	Learn CSS Grid for 2D layouts.	Grid Garden (interactive game)
12	Learn responsive design: media queries, mobile-first approach.	MDN: Responsive design
13	Learn CSS transitions/animations basics and hover states.	MDN: Using CSS transitions
14	Review + Mini Project: Restyle your Week 1 profile page — add a flexbox nav bar, grid layout for content, and make it mobile-responsive.	—

Week 2 Project: A fully styled, responsive version of your profile page that looks good on both mobile and desktop.

Week 3: JavaScript Fundamentals

Milestone: Add interactivity and logic to your pages.

Day	Task	Resources
15	Learn variables, data types, and operators in JS.	MDN: JS first steps
16	Learn conditionals (<code>if/else</code>) and loops (<code>for</code> , <code>while</code>).	JavaScript.info: Conditionals
17	Learn functions and arrays.	JavaScript.info: Functions
18	Learn the DOM: selecting elements (<code>querySelector</code>), changing text/styles.	MDN: DOM scripting introduction
19	Learn event listeners: clicks, form submissions, keyboard input.	MDN: Events
20	Learn objects and basic array methods (<code>map</code> , <code>filter</code> , <code>forEach</code>).	JavaScript.info: Objects
21	Review + Mini Project: Build a to-do list app — add/remove/check off items using the DOM and event listeners.	—

Week 3 Project: An interactive to-do list app (add, delete, and mark tasks complete) built with vanilla JavaScript.

Week 4: Real Projects & Deployment

Milestone: Combine everything into portfolio-ready projects and publish them online.

Day	Task	Resources
22	Plan a capstone project (see below) — sketch layout, list features.	Pen & paper or Excalidraw
23	Build capstone: HTML structure.	—
24	Build capstone: CSS styling and responsive layout.	—
25	Build capstone: core JavaScript functionality.	—
26	Build capstone: polish, fix bugs, test on mobile view.	Chrome DevTools (built into browser)
27	Learn Git & GitHub basics: commit, push, repositories.	GitHub Skills: Intro to GitHub
28	Deploy your capstone project using GitHub Pages (free hosting).	GitHub Pages docs
29	Deploy your Week 1–3 projects too; write short READMEs for each.	—
30	Wrap-up: Review everything, list next learning steps (e.g., a JS framework like React), and share your portfolio link.	—

Capstone Project Options (pick one):

- A recipe/weather app that fetches data from a free public API
- A personal portfolio site showcasing your Week 1–3 projects
- An interactive quiz or calculator app

Final Outcome

By Day 30, you will have:

- **Solid fundamentals** in HTML, CSS, and JavaScript
- **4 hands-on projects:** a profile page, a responsive redesign, a to-do app, and a capstone project
- **A live portfolio** deployed on GitHub Pages that you can share with employers or on your resume
- **Working knowledge of Git/GitHub**, a skill every developer needs
- **A clear next step** for continued learning (e.g., a JavaScript framework, backend basics, or a coding bootcamp)

Tips for Success

- Code every day, even 20–30 minutes — consistency beats long, infrequent sessions.
- Type out every example yourself; don't just read or copy-paste.
- When stuck, try the MDN Web Docs search first, then ask specific questions in communities like freeCodeCamp's forum.
- Keep all your projects in a single GitHub account from Day 1 — it becomes your portfolio automatically.
